

Point of Sale Terminal or Handheld

PROLOGIC FIRST

Touché

Touché is a touch-screen or handheld easy-to-use point of sale software for food and beverage outlets.

Touché offers the entire order taking, cashing and reporting features that you would expect from a superior point-of-sale system. In particular, you will love **Touché** reports. For example, a report that identifies the most and the least popular items on your menu. Or an item sales analysis by day of week through a chosen period.

Touché suits a variety of F&B operations. When configured for fast food outlets, it offers access to open checks at the touch of a key. In take away operations, you can query customers by their phone number. Food courts that use pre-paid cards for settlement of checks will find **Touché** up to the task. Fine dining restaurants will find the unique **Touché Profiler** that tracks guest visits and preferences invaluable.

Touché operates on any purpose-built Windows based point-of-sale hardware and supported peripherals. Allowing you the freedom to choose the most cost-effective hardware vendor. The handheld version of **Touché** is, functionally, the most powerful available.

Touché offers best-of-class functionality on affordable terms. Like all other hospitality software from Prologic First, **Touché** delivers the best value-for-money.

More Value for Money

Functional summary
